By the way, the Britannica reports the existence of another “Tartar” state in the XVIII century – Independent Tartary with a capital in Samarqand ([1118], Volume 2, pages 682-684). As we are beginning to realise, it had been yet another remnant of the Horde that existed as a single empire in the XIV-XVI century. The fate of this state is known, unlike that of the Muscovite Tartary – the Romanovs conquered it in the middle of the XIX century. We are referring to the so-called “conquest of Central Asia”, as it is evasively called in the modern textbooks. The conquest had been very violent, and the name Independent Tartary disappeared from the maps forever. It is still known to us under the very neutral alias of “Central Asia”. Samarqand, the capital of the Independent Tartary, was taken by the Romanovian troops in 1868 ([183], Volume 3, page 309). The entire war lasted four years (1864-1868).

2.2. North America on the maps of the XVII-XVIII century. The Europeans had remained ignorant of the geography of the American West and Southwest until the defeat of “Pougachev”. The gigantic terra incognita and the “insular” nature of the Californian peninsula.

Let us return to the epoch of the XVIII century and consider the representations of North America and Siberia on the maps of the XVIII century, before the defeat of Pougachev in 1773-1775. It turns out that the Western part of the North American continent is altogether absent from these maps. The geography of the American Northwest had remained a mystery for the European cartographers of the epoch – they didn’t even know whether or not there was a strait between the American continent and Siberia. It is very odd indeed that the American government had shown
no interest in the neighbouring territories until the late XVIII – early XIX century, when it did develop such an interest all of a sudden, and started a very rapid colonization. Could it be owing to the fact that the territory in question became “no man’s land” legally, and thus needed to be colonised as quickly as humanly possible, lest the Romanovs should seize it themselves from the West.

Let us turn to the maps of North America, starting with the Britannica map of 1771, which had accounted for the latest advances of the epoch’s geographical science. Once again, bear in mind that we are talking about the very end of the XVIII century, the epoch immediately predating the war against Pougachev. The full map is presented above in fig. 12.4. Fig. 12.17 is a close-in of its fragments, wherein we see that the entire North-West of the American is a single blank spot adjacent to the ocean – the coastline is altogether absent. This can only mean that no European ship had approached these shores before 1771; a single voyage would suffice for the cartographers to get a rough idea of what the coast had looked like. Yet we are told that the Russian Alaska had been owned by the Romanovs back in the day. Had this been the case, the European maps would naturally depict the coastline of the American Northwest. We see the most peculiar “Parts Undiscovered” instead, qv in fig. 12.17.

Let us turn to another English map; this one was published earlier, in 1720 or later, and compiled in...
London ([1160], pages 170-171; see fig. 12.18). Once again, we see a large part of the North American continent drawn as a blank spot with the legend “Parts Unknown”. One must notice the fact this map depicts the Californian peninsula as an island, which means that the Horde had prohibited Europeans entry to this part of the world in the early XVIII – before the “revalt of Pougachev”.

We see the same to be the case with a French map of 1688 (see fig. 12.19). The Californian peninsula is drawn as an island once again – incorrectly, that is. What could this possibly mean? A simple thing – the coastline of North America had still remained unknown to the Europeans; the latter were denied access to these lands, hence their ignorance of the fact that the peninsula joins the continent somewhat further to the north.

Another example can be seen in fig. 12.20-12.21. The map in question is of a French origin and dates from 1656 the earliest (see [1160], pages 152 and 153). We see the same error once again – California drawn as an island, the entire American Northwest being a blank spot.

Let us proceed. In figs. 12.22 and 12.23 we see a French map dating from 1634. Once again, we see the American Northwest blank, and California misrepresented as an island.

It goes on and on like this – there were too many such maps made in the XVII-XVIII century. One might arrive at the following conclusion: the Western part of the North American continent had not belonged to the USA before the war with Pougachev in 1773-1775, constituting part of the Muscovite Tartary, whose capital had been in Tobolsk. Europeans weren’t
allowed entry here; this circumstance became reflected in the maps of that epoch, whereupon we find huge blank spots and the fantasy island of California, with only the southern part known. The very name California might have initially meant, “Land of the Caliph”. Let us remind the reader that, according to our reconstruction, Batu-Khan, the great conqueror also known to us as Ivan Kalita (Caliph) had been the first Caliph of Russia and the Horde. He is one of the founders of the Great = “Mongolian” Empire.

Let us recollect the mediaeval Japan behaving in a manner similar to the Muscovite Tartary – it had apparently been yet another part of the Great = “Mongolian” Empire. Japan had also refused entry to the foreigners up until the 1860’s, which might have reflected some general policy of the local rulers. The Czars, or Khans of these “Mongolian” states, the last remnants of the Horde, had been hostile towards the Europeans, regarding them as enemies of the defunct Great Empire, which they must have still identified themselves with. It appears that there had been close ties between Japan and Muscovite Tartary up until the late XVII century. Japan segregated after the decomposition of the latter nation in 1773-1775 (the defeat of Pougachev).

Europeans (the Dutch) and Americans had only managed to force their entry to Japan at the end of the XIX century; the wave of the “progressive process of liberation” had only reached these parts in an epoch this recent.

2.3. North America on the maps presumably dating from the XV-XVI century. The latter contain more correct information about America than the maps that are supposed to postdate them

Let us return to the maps of America – the ones dating from the alleged XV-XVI century this time, in order to see how the European cartographers of the
